ation of YAS pathways (Dual vs Single, log2FC, * p<0.05)
Ribosome
Pentose phosphate pathway
Valine, leucine and isoleucine biosynthesis
Glycolysis / Gluconeogenesis
Citrate cycle (TCA cycle)
Carbon fixation pathways in prokaryotes
Phenylalanine, tyrosine and tryptophan biosynthesis
Ribosome biogenesis in eukaryotes
Lysine biosynthesis
One carbon pool by folate
Fatty acid biosynthesis
Regulation of actin cytoskeleton
Biosynthesis of siderophore group nonribosomal peptides
Phosphotransferase system (PTS)
cAMP signaling pathway
Bacterial chemotaxis
ABC transporters
Flagellar assembly
Bacterial secretion system
RNA degradation
Biotin metabolism
Proteasome
Lipopolysaccharide biosynthesis
Ascorbate and aldarate metabolism
Thiamine metabolism
Porphyrin metabolism
Homologous recombination
Mismatch repair
Peptidoglycan biosynthesis
Nucleotide excision repair
Base excision repair
